1. Safety information

1.1 Installation and commissioning

- When laying wires, please ensure that no damage occurs to any of the constructional fire safety measures presented in the building.
- The controller must not be installed in rooms where easily inflammable gas mixtures are present or may occur.
- The permissible environmental conditions can’t be exceeded at the site of installation.
- Before connecting the device, make sure that the energy supply matches the specifications that controller requires.
- All devices connected to the controller must conform to the technical specifications of the controller.
- All operations on an open controller are only to be conducted cleared from the power supply. All safety regulations for working on the power supply are valid.
- Connecting and /or all operations that require opening the collector (e.g. changing the fuse) are only conducted by specialists.

1.2 About this manual

This manual describes the mounting, functions and operation of a solar controller used for a solar hot water system, for mounting of other devices of a completed solar hot water system like solar collector, pump station and storage, please is sure to observe the appropriate installation instructions provided by each manufacturer. Mounting, wire connecting, commissioning and maintenance of this controller may only be performed by the trained professional person; the professional person should be familiar with this manual and follow the instructions contained herein.

1.3 Liability waiver

The manufacturer can’t monitor the compliance with these instructions or the circumstances and methods used for installation, operation, utilization and maintenance of this controller. Improper installation can cause damages to material and person. This is the reason why we do not take over responsibility and liability for losses, damages or cost that might arise due to improper installation, operation or wrong utilization and maintenance or that occurs in some connection with the aforementioned. Moreover we do not take over liability for patent infringements or infringements – occurring in connection with the use of this controller on the third parties rights. The manufacturer preserves the right to put changes to product, technical data or installation and operation instructions without prior notice. As soon as it becomes evident that safe operation is no longer possible (e.g. visible damage). Please immediate take the device out of operation. Note: ensure that the device can’t be accidentally placed into operation.

1.4 Important information

We have carefully checked the text and pictures of this manual and provided the best of our knowledge
1.5 Signal description

Safety indication: Safety instructions in the text are marked with a warning triangle. They indicate measures which can lead to injury of person or safety risks.

Operation steps: small triangle “►” is used to indicate operation step.

Notes: Contains important information about operation or functions.

1.6 Button and HMI description

Controller is operated with the 6 buttons on the right side of the screen

- “ ” holiday button
- “M.H” button: manual heating
- “SET” button: confirm / selection
- “▲” up button: increase the value
- “▼” down button: reduce the value
- “ESC” button return/ exit: return to previous menu

2. Overview

2.1 Technical data

- **Inputs:**
  - 1 * PT1000 temperature sensor input
  - 2 * NTC10K, B=3950 temperature sensor input
  - 1 * FRT flow meter port (Optional)
- **Outputs:**
  - 1 * Electromagnetic relay, maximum current 2A
  - 1 * Electromagnetic relay, maximum current 10A
- **Functions:** operating hours counter, tube collector function, thermostat function, adjustable system parameters and optional functions (menu-driven), balance and diagnostics
- **Power supply:** 100…240V ~ (50…60Hz)
- **Rated impulse voltage:** 2.5KV
- **Housing:** Plastic ABS
- **Mounting:** Wall mounting
- **Operation:** 6 push buttons at the front cover
- **Protection type:** IP43
- **Ambient temperature:** 0 ... 40 °C
- **Dimensions:** 153*180*40mm

2.2 Delivery list

- 1 * SR1535 controller
- 1 * accessory bag
- 1 * user manual
- 1 * PT1000 temperature sensor (φ6*50mm, cable length 20meters)
- 2 * NTC10K temperature sensor (φ6*50mm, cable length 3meters)
- 2 * power jack for pump and electrical heater
- 1 *10A power cord
3. Installation

Note: The unit must only be located in the dry interior rooms. Please separate routing of sensor wires and mains wires. Make sure the controller as well as the system is not exposed to strong electromagnetic fields.

3.1 Mounting controller

Follow the below steps to mount the controller on the wall.

- Choose a suitable site
- Make the position of hole (note that the positive and negative)
- Drill the fixing hole, insert the expansion screw.
- Fix the hanging plate by using screw.
- Press the control unit on the hanging plate.
- Drill and insert lower wall plugs.
- Fasten the housing to the wall with the lower fastening screw and tighten.
- Carry out the electrical wiring in accordance with the terminal allocation
- Put the cover on the housing. Attach with the fastening screw.

3.2 Wiring connection
Manual of SR1535 intelligent controller

● Input ports

➢ Main supply: 10A 1.5m power cord.
➢ T1: PT1000 temperature sensor with 20m cable, for measuring the temperature of collector and thermal energy calculation.
➢ T2 ~T3: NTC10K, B=3950 temperature sensor with 3m cable, for measuring temperature of tank and pipe.
➢ FRT flow meter port: for flow meter connection (The FRT flow meter port not in the standard configuration; flow meter should be purchased separately, detailed see annexed part)

● Output ports

Output R1: Electromagnetic relay, connect a power jack with 0.5m cable. Max. Current: 1A
Output HR: Electromagnetic relays, designed for on/off control of afterheating/thermostat function, Max. Current: 1500W.

● Advice regarding the installation of temperature sensors:

➢ Only original factory equipped Pt1000 temperature sensors are approved for using with the controller, it is equipped with 20m cable and suitable for all weather conditions, the prior 1.5m silicon cable is temperature resistant up to 280°C, the extension PVC cable is temperature resistant up to 80°C connect the temperature sensors to the corresponding terminals with either polarity.
➢ Only original factory equipped NTC10K, B=3950 temperature sensors are approved for using with tank and pipe, it is equipped with 3m PVC cable, and the cable is temperature resistant up to 80°C, connect the temperature sensors to the corresponding terminals with either polarity.
➢ All sensor cables carry low voltage, and to avoid inductive effects, must not be laid close to 230 volt or 400 volt cables (minimum separation of 100mm).
➢ If external inductive effects are existed, e.g. from heavy current cables, overhead train cables, transformer substations, radio and television devices, amateur radio stations, microwave devices etc., then the cables to the sensors must be adequately shielded.
➢ Sensor cables may be extended to a maximum length of ca. 100 meter, when cable’s length is up to 50m, and then 0.75mm² cable should be used. When cable’s length is up to 100m, and then 1.5mm² cables should be used.

4. System description (Standard solar system with 1 tank, 1 collector field)

Description:
The controller calculates the temperature difference between collector sensor T1 and tank sensor T2. If the difference is larger than or identical to the adjusted switch-on temperature difference, the solar circulation pump (R1) will be switched on and the tank will be loaded until the switch-off temperature difference or the maximum tank temperature is reached.
5. Function’s parameters and options

5.1 Overview of menu structure
5.2 Menu operation description

- Access main menu
  ▶ Press “SET” button to access main menu
  ▶ Press “▲/▼” to select menu
  ▶ Press “SET” button to enter the submenu

- Access submenu
  ▶ After selecting main menu, then press “SET” button to access submenu
  ▶ Press “▲/▼” button to select submenu,
  ▶ Press “SET” button to enter the value adjust interface or selection function (select ON/OFF)
  ▶ Press “▲/▼” to adjust value
  ▶ Press “SET” to confirm the value you set

Note: Enter the menu adjustment interface, if you don’t press any button within 3 minutes, screen will exit the adjustment and turn to main interface.

5.3 Value checking

At the normal operation mode, press “▲/▼” button, you can view the temperature of collector and tank, controller running time, software version.

Note: enter the value check interface, if you don’t press any button within 1 minutes, screen will exit the check interface and turn to main interface.

5.4 Functions checking

under standby status, press “SET” button for 3 seconds, then press “▲/▼” button to check Thermal disinfection setting.

Note: Thermal disinfection functions can be displayed in controller only when the function is activated, when it is running, its code blinks in time zone.

6. Functions operation and parameters setting (for user)

6.1 CLK Time setup

<table>
<thead>
<tr>
<th>Menu structure</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLK (Main menu)</td>
</tr>
<tr>
<td>[00:00]</td>
</tr>
</tbody>
</table>

▸ Press “SET” button, select CLK menu
▸ Press “SET” button, hour “00” blinks on the display.
▸ Press “▲/▼” button to adjust hour
Press “SET” button, minute time “00” blinks on the display
Press “▲/▼” button to adjust minute
Press “SET” or “ESC” button to save the set value

**Note:** In the case power to controller is switched-off, date and time will be remembered in controller for 36 hours.

### 6.2 AH Afterheating/thermostat function

The thermostat function works independently from the solar operation and can e. g. be used for using surplus energy or for afterheating.

- **AH O < AH F**
  thermostat function for afterheating

- **AH O > AH F**
  thermostat function for using surplus energy

After heating                      Surplus energy releasing

- In order to block the thermostat function for a certain period, there are 3 time frames t1 ... t3.
- The sensor(AHS) for "Afterheating/thermostat" is selectable. It's controlled by tank’s sensor T3 or T2(selectable).
- If you want to shut off one timing heating, then you can set the turning on time and turning off time same value (for example, set tA2 O 00:00 and set tA2 F 00:00, the second time section not available, afterheating/thermostat function OFF.
- Afterheating/thermostat function set: If the thermostat function is supposed to run from 06:00 a.m. and 05:00 p.m. only, adjust tA1O to 06:00 and tA1F to 17:00.

**Note:** If customer use electrical heater as back-up, please according to the power of electrical heater to equip corresponding safety devices like contactor and breaker with this controller, we strongly recommend equipping with SR802 device with this controller, (SR802 detailed technical data see spare parts)

### Function setting:

- Press “SET” button to access main menu, and press “▲” to select AH Afterheating/thermostat main menu.
- Press “SET” button to set parameter, “AHS S3” displays on the screen.
- Press “SET” button, “S3” blinks
- Press “▲/▼” button to select desired sensor (S3 for T3, S2 for T2)
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button, “AHO 40oC” displays on the screen
► Press “SET” button, “40oC” blinks
► Press “▲/▼” button to adjust the switch-on temperature.
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button, “AHF 45oC” displays on the screen
► Press “SET” button, hour time “45oC” blinks
► Press “▲/▼” button to adjust hour of the switch-off temperature.
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button “tA1O 00: 00” displays on the screen
► Press “SET” button, hour time “00” blinks
► Press “▲/▼” button to adjust hour of the switch-on time
► Press “SET” button, minute time “00” blinks
► Press “▲/▼” button to adjust minute of the switch-on time
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button, “tA1F 23: 59” displays on the screen
► Press “SET” button, hour time “23” blinks
► Press “▲/▼” button to adjust hour of the switch-off time
► Press “SET” button, minute time “59” blinks
► Press “▲/▼” button to adjust minute of the switch-off time
► Press “SET” or “ESC” button to save the setting.
► Press “▲” button to access the window of the switch-on time of the second afterheating/thermostat, repeat above steps to set time for the second and third afterheating/thermostat.

If you want to shut off one time of afterheating/thermostat, you can set switch on and off at the same value. (For example, the second time section no this function, then you can set tA2O 00: 00 and tA2F 00: 00)

When heating sign blinks on the screen, it indicates that after-heating function is activated.

**Note:**

The Sign” represents After-heating

1. Within the preset time section, heating sign is lighted on the screen
2. Out of the preset time section, heating sign doesn’t display on the screen.

The Sign”AH“ represents Thermostat

1. Within the preset time section, heating sign “AH” is lighted on the screen if“AH” is blink, it’s mean the Thermostat(cooling) is running.
2. Out of the preset time section, heating sign “AH” doesn’t display on the screen.
7. Function operation and parameter setup (engineer)

7.1 PWD Password

Menu structure

Access main menu, select “PWD 0000” to enter password
  ► Press “SET” button, the left digital blinks, enter password, factory set is “0000”
  ► Press “▲/▼”, to enter the first digital
  ► Press “SET”, the second digital blinks
  ► Press “▲/▼” to enter the second digital
  ► Press “SET”, the third digital blinks
  ► Press “▲/▼” to enter the third digital
  ► Press “SET”, the forth digital blinks
  ► Press “▲/▼” to enter the forth digital
  ► Press “SET”, to access main menu

Through password set to limit the user to change some parameters, 4 digitals needed. Default is 0000.
If no password is set, then just press “SET” five times to access main menu directly.

7.2 LOAD tank heating

Function description:

- △T control logic
  The controller works as a standard temperature differential controller. If the temperature reaches or exceeds the switch-on temperature difference (DTO), the pump switches on. When the temperature difference reaches or falls below the adjusted switch-off temperature difference (DTF), the respective relay switches off.

  **Note:** The switch-on temperature difference must be 0.5 K higher than the switch-off temperature difference. The set temperature difference must be at least 0.5 K higher than the switch-on temperature difference.

- SMX Maximum tank temperature protection set
  If the tank temperature reaches the adjusted maximum temperature, the tank will no longer be loaded in order to avoid damage caused by overheating. If the maximum tank temperature is exceeded,
Manual of SR1535 intelligent controller

The sensor for tank maximum limitation (SMAX) can be selected. The maximum limitation always refers to the sensor selected (T2 or T3). The switch-on hysteresis (HYST) is selectable (Default is 2°C), for example, when tank maximum temperature is set to 70°C, then at 68°C, Maximum tank temperature protection function is deactivated automatically.

Setup the functions
► Select "LOAD" main menu
► Press “SET”, “DTO 6K” displays on the screen
► Press “SET”, “6K” blinks
► Press “▲/▼”, to adjust the switch-on temperature of the solar circuit pump
► Press “SET” or “ESC” to save the setting
► Press “▲”, “DTF 4K” displays on the screen
► Press “SET”, “4K” blinks
► Press “▲/▼”, to adjust the switch-off temperature of solar circuit pump
► Press “SET” or “ESC” to save the setting
► Press “▲”, “SMX 70°C” displays on the screen
► Press “SET”, “70°C” blinks
► Press “▲/▼”, to adjust the maximum temperature of tank
► Press “SET” or “ESC” to save the setting
► Press “▲”, “SMAX S3” displays on the screen
► Press “SET”, “S3” blinks
► Press “▲/▼”, select the sensor for maximum temperature of tank (S3 for T3, S2 for T2)
► Press “SET” or “ESC” to save the setting
► Press “▲”, “HYST 2K” displays on the screen
► Press “SET”, “2K” blinks
► Press “▲/▼”, to adjust the hysteresis of tank maximum temperature
► Press “SET” or “ESC” to save the setting

7.3 COL Collector function

Function description

● OCEM Collector emergency shutdown
When the collector temperature exceeds the adjusted collector emergency temperature, then solar pump (R1) switches off in order to protect the system components against overheating (collector emergency shutdown). If the maximum collector temperature (OCEM) is exceeded, sign ☀️ ⚠️ is displayed.

⚠️ Warning! Risk of injury! Risk of system damage by pressure surge! If water is used as the heat transfer fluid in pressure systems, water will boil at 100 °C. Then do not set the collector limit temperature higher than 95 °C.

● OCCO Collector cooling
The collector cooling function keeps the collector temperature rising within the operating range by heating the tank. If the tank temperature reaches 95°C the function will be switched off for safety reasons.

When the tank temperature exceeds the adjusted maximum temperature of tank, then solar system is switched off. If the collector temperature rises up to its adjusted maximum collector temperature, the solar pump is switched on again until the collector temperature falls below the maximum collector temperature. The tank temperature may then exceed its maximum temperature, but only up to 95°C (emergency shutdown of the tank), and sign ⚠️ blinks on the screen, system stops.
If the collector cooling is active, ☀️ blinks on the screen.
This function is only available when the system cooling function (OSYC) and the heat transfer function (OHDP) are not activated.

- **OCMI Collector minimum temperature**
  The minimum collector temperature is the lowest temperature of collector, only when collector temperature is higher than that temperature, solar pump (R1) just can be switched-on, if the collector temperature falls below the adjusted minimum temperature, the function is activated, 🌿 slow blinks on the screen.

- **OCFR Collector antifreeze function**
  Collector antifreeze function activates the loading circuit between the collector and the tank when the collector temperature falls below the adjusted temperature **CFRO**. This will protect the fluid against freezing or coagulating. If collector temperature exceeds the switch-off temperature of collector antifreeze function **CFRF**, the solar pump will be switched off again.

If collector antifreeze function is activated, sign 🌿 slow blinks on the screen.

**Note:** Since this function uses the limited heat which is saved in the tank, so the antifreeze function should be used in regions where ambient temperatures is around the freezing point only for a few days.

- **OTCO Tube collector function**
  This function is used for improving the switch-on behavior in systems with non-ideal sensor positions (e.g., with some tube collectors).

This function operates within an adjusted time section. It activates the collector circuit pump R1 for an adjustable runtime between adjustable pauses in order to compensate for the delayed temperature measurement.

If the runtime is set to more than 10s, the pump will run at 100% for the first 10s of the runtime. For the remaining runtime, the pump will run at the adjusted minimum speed.

If the collector sensor is defective or the collector is blocked, this function will be switched off.

7.4 COOL Cooling function

Function description:
There are 2 cooling functions can be activated for 2 different devices: system cooling, tank cooling.

• OSYC System cooling
The system cooling function aims to keep the lifetime of a solar system for a longer time. The function overrides the maximum tank temperature to provide thermal relief of the collector field and the heat transfer fluid on hot days. If the tank temperature is higher than the adjusted maximum tank temperature and the switch-on temperature difference DTCO is reached, the solar pump remains running or will be switched on. Solar loading is continued until either the temperature difference falls below the adjusted switch-off value DTCF or the collector emergency shutdown temperature OCEM is reached.

Note: This function will only be available when the collector cooling function.

• OSTC Tank cooling
When the tank cooling function is activated, the controller aims to cool down the tank during the night in order to prepare it for solar loading on the following day. If the tank temperature exceeds the adjusted maximum tank temperature SMAX, the collector temperature falls below the tank temperature and down to the switch-on temperature difference DTCO of this cooling function, then system will be activated in order to cool down the tank by releasing the energy through the collector.

If tank cooling function is activated, sign ☀️ blinks on the screen

Note: if tank temperature reaches to 95 °C, all cooling functions will be locked.

Hysteresis switch on temperature difference is 5K.

7.5 MAN Manual operation

For control and service work, the operating mode of the relays can be manually adjusted. For this purpose, select the adjustment menu MAN (for R1, HR) to set output “On/OFF” Manually.

**Note:** When manual mode is activated, sign \( \mathbf{m} \) blinks on the screen, controller runs for 15 minutes and then switch-off all output, control exits manual mode automatically.

► Press “SET” or “ESC” to save the setting
7.7 OTDI Thermal Disinfection function

Function description:
This function helps to prevent the spread of Legionella in DHW tanks by systematically activating the after-heating.

For thermal disinfection, the temperature at the allocated sensor has to be monitored. During the monitoring period PDIS, this protection ensures the disinfection temperature is continuously exceeded the disinfection temperature TDIS for the entire disinfection period DDIS. Thermal disinfection can only be completed when the disinfection temperature is exceeded for the duration of the disinfection period without any interruption.

The monitoring period PDIS starts as soon as the temperature at the allocated sensor falls below the disinfection temperature TDIS, once the monitoring period PDIS ends, disinfection period SDIS starts, and the allocated reference relay activates the after-heating, when tank temperature exceeds the disinfection temperature, disinfection phase DDIS starts and disinfection heating time countdowns, countdown finishes, disinfection heating finishes.

► Press “SET”, “18” blinks
► Press “▲/▼”, to adjust the start time of the disinfection
► Press “SET” or “ESC” to save the setting

7.8 FS Flow rate monitoring and pump dry running protection

Function description:
In order to achieve this function, an extra digital flow meter FRT should be installed on the return pipe of solar system, when solar pump R1 is triggered, the flow rate of return pipe is monitored to ensure system runs normally.
If relay R1 is powered, if controller hasn't got signal from digital flow meter within 30 seconds, then solar pump R1 will be stopped, error message will appear, and sign □ will blinks on the screen. By this function, it can avoid pump dry running.

**Note:** reasons for no flow rate in system:
- No heat transfer liquid in system pipe due to pipe leakage.
- Under this menu, the flow monitoring function can be activated and deactivated.

If open option of the flow monitoring function is activated, and then the sign □ will displays on the screen, when circuit pump R1 is running, at the checking status you can check the flow rate by press “▲/▼ ” button and check current flow rate L/M.

**Note:** digital flow meter FRT is not included in the delivery list, it is needed to buy separately, see its specification in item 10.
Menu structure

Function setting

► Select FS menu
► Press “SET”, “FS OFF” displays
► Press “SET”, “OFF” blinks
► Press “▲/▼”, to activate this function,
► Press “SET” or “ESC” to save the setting

7.9 UNIT C-F Switch

Menu structure

Function setting

► Select UNIT menu
► Press “SET”, “TEMP °C” displays on the screen
► Press “SET”, “°C” blinks
► Press “▲/▼”, to select temperature unit
► Press “SET” or “ESC” to save the setting

7.10 BEEP Beeper fault warning

When system has fault (temperature sensor fault, beep will send warning, it’s will exist the fault warning after you press “ESC” button.)

BEEP (Beeper fault warning function) Setting

► Press “SET”, “BEEP” display on the screen.
► Press “SET”, “BEEP OFF” display on the screen.
► Press “SET”, “OFF” blink on the screen.
► Press “▲/▼” button, to switch on the function, “BEEP ON” display on the screen.
► Press “SET” or “ESC” to save the setting.

7.11 RET Reset

By means of the reset function, all adjustments can be reset to the factory settings.

Menu structure

RST  (Main menu) ▼

RSTP

Submenu

Function setting

► Select RST menu
► Press “SET”, “RSTP” displays on the screen
► Press “SET”, “YES” blinks
► Press “SET” for 3 seconds, beeper sounds “di” 3 times, “YES” lighting, and it indicates system is recovered to factory set.
► Press “ESC” return to the submenu

7.12 PASS Password setup

Function description:

This function helps to customers to set up new password.
Menu structure

Function Setting
Select the password setting, “PASS” menu
To access main menu PASS,
► Press “SET” button, “PWDC 0000” appears,
► Press “SET” button, the left digital blinks, ask for entering current password, factory set is “0000”
► Press “▲/▼”, button to enter the first digital
► Repress “SET” button, the second digital blinks
► Press “▲/▼”, button to enter the second digital
► Repress “SET” button, the third digital blinks
► Press “▲/▼”, button to enter the third digital
► Repress “SET” button, the fourth digital blinks
► Press “▲/▼”, button to enter the fourth digital
► Press “SET” button, “PWDG 0000” displays on the screen, ask for reentering the new password, doing like above to reenter the new password, “OK” displays on the screen to indicate reentering password successfully.

Note: If the password is forgot, it is impossible to recover, but you can recover the password to factory set, then you can reedit a password like above descript steps, doing like following to recover to factory set.
► Switch-off the power to controller
► Hold down “ESC” button
► Reconnect the power supply, when beeper sounds 3 di….., and then release “ESC” button, Controller recovers to the factory set password (factory set password is 0000),

7.13 M.H Manual heating
Function Description:
It is possible to trigger back-up heating manual with this controller to heat tank. When tank temperature is lower than the set point of the switch-on temperature, manual heating function is in standby, when you press the manual heating button, heating will start, and it works until tank temperature reaches to the set point.

Activate/deactivate this function:
Manual of SR1535 intelligent controller

► Press “M.H” button for 3 seconds, temperature “60°C” blinks on the screen.
► Press “▲/▼”, to adjust the desired temperature, adjustable range 10°C~80°C, factory set is 60°C.
► Press “M.H” or “ESC” or waiting for 20 seconds to trigger the manual heating, then manual sign displays on the screen, heating sign blinks the screen.
► Press “M.H” again, switch-off manual heating.

Note: 1). Manual heating is not a continuous heating process, it is triggered manually, and when the temperature reaches to the set point, the heating process is stopped. And manual heating function is stopped automatically.
2). AHO>AHF: Thermostat function for using surplus energy, manual heating is not available.

7.14 Holiday function
The holiday function is used for operating the system when no water consumption is expected, e.g. during a holiday absence. This function cools down the system in order to reduce the thermal load. When bottom temperature of tank below down 35°C, the solar pump is deactivate.

Activate/deactivate this function:
► Press “ ” button for 3 seconds, “HDAY 05” displays on the screen.
► Press “▲/▼”, to adjust holiday’s days, adjustable range 0-99 days.
► Press “ ” for 3 seconds again, to adjust holiday’s days to 0.
► Press “ESC” to exit, holiday function is closed.

Note: When you return from holiday, please deactivate this function in time.
8. Protection function

8.1 Memory function during power failure

When power of controller is failed, and when power is switched-on, controller will keep the parameters which set before power failure.

8.2 Screen protection

When no any press on button for 5 minutes, screen protection is activated automatically, and then LED background lamp is switched-off. Through press any button to light LED lamp again.

8.3 Trouble checking

The built-in controller is a qualified product, which is conceived for years of continuous trouble-free operation. If a problem occurs, the most of causes is from the peripheral components but no relation with controller itself. The following description of some well-known problems should help the installer and operator to isolate the problem, so that the system can be put into operation as quickly as possible and to avoid unnecessary cost. Of course, not all possible problems can be listed here. However, most of the normal problems encountered with the controller can be found in the list below, only return the controller to seller when you are absolutely sure that none of the problems listed below is responsible for the fault.

On the screen, sensor sign and warning sign \(\Delta\) blinks

Sensor failure, press “\(\Delta/\n\) button, an error code instead of temperature displays on the corresponding sensor place
